Most animals and plants enter into lifelong associations with beneficial microorganisms that have a profound impact on host development and health. This course will survey various model systems that are currently being used in microbiome research to understand the molecular mechanisms by which these complex associations are established and maintained in nature.

Instructor: Spencer Nyholm (spencer.nyholm@uconn.edu)

Prerequisites: MCB 2610 Fundamentals of Microbiology; ENG 1007, 1010, 1011, or 2011
